

Sparse Demonstrations

Only a few trajectories lead state-action space is severely under-covered

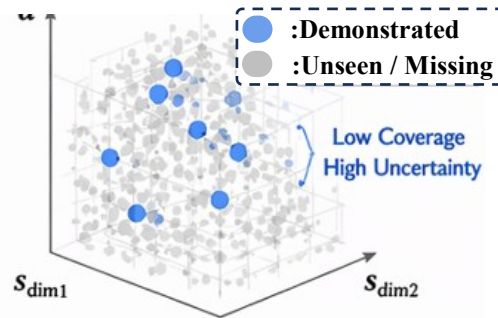

Front

Wrist

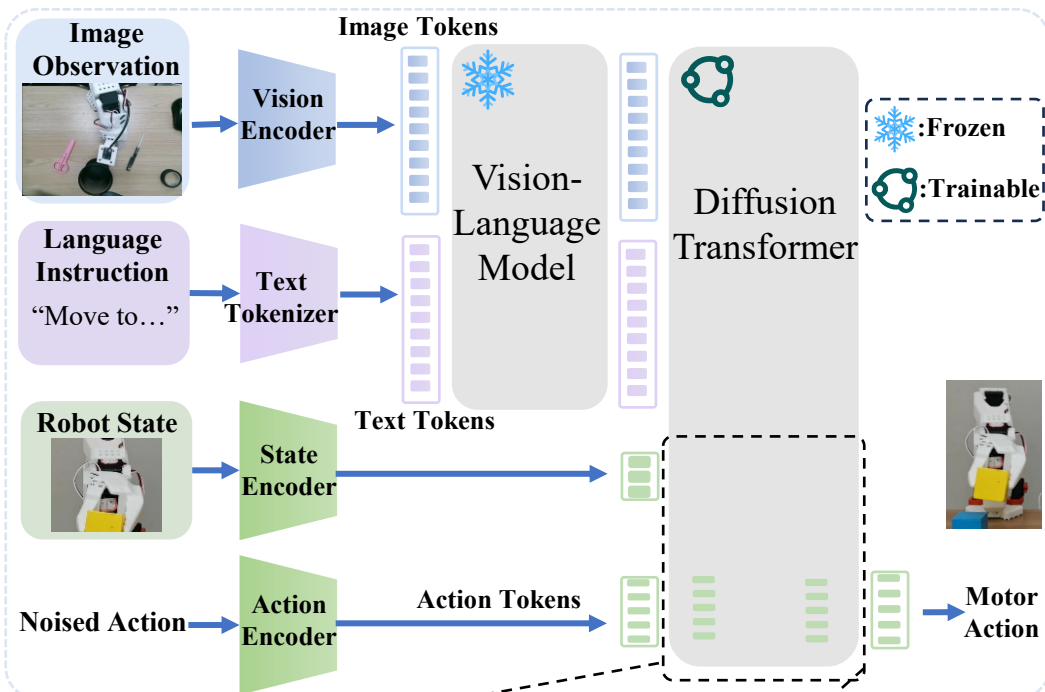

State-Action Space

Latent Policy Modeling

VLA policy learns a mapping from multi-modal inputs to a distribution over actions, enabling robust learning from sparse data.

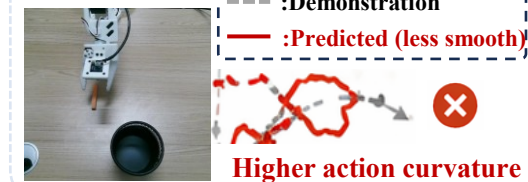

Training Regularization

Both variants share the same architecture and inference path; only the training objective differs.

Without Training Regularization

Base flow-matching loss

With Training Regularization

Base + temporal/velocity terms
